TABLE OF CONTENTS

Executive Summary

Historical Valuation Trend

The following chart shows how the business valuation has evolved over time based on historical financial snapshots:

Generating professional valuation trend chart (1 data points available)

$1,235,282,874,264

Estimated Business Value

Range: $0 - $1,393,534,085,861

This comprehensive valuation analysis of 20130314143016 inc has been prepared using three widely accepted valuation methodologies: the Asset Approach, Income Approach, and Market Approach. The analysis incorporates current market conditions, industry factors, and company-specific characteristics to arrive at a well-supported conclusion of value.

Valuation Approaches Summary

Valuation Approach	Estimated Value
Asset Approach	$0
Income Approach (Blended)	$1,393,534,085,861
Market Approach	$1,176,899,103,001

Methodology Weighting

Our intelligent weighting system determined the optimal balance between valuation approaches based on business characteristics, industry factors, and financial metrics:

Approach	Weight Applied
Income Approach	52.3%
Market Approach	43.0%
Asset Approach	4.7%

Key Findings

- **Financial Performance:** The company's revenue stands at $200,000,000,000, with a net income of $219,942,080,000. This indicates a strong financial position, with the company generating significant profits. The total assets and liabilities are not disclosed. The high net income suggests efficient operations and potential for further growth.

- **Valuation Highlights:** The valuation results show a market approach value of $1,176,899,103,000.53 and an SDE income approach value of $1,447,219,939,200. The DCF income approach yields a value of $1,339,848,232,522.005. These values indicate a significant business worth.

- **Key Metrics Analysis:** The SDE multiple is 6.58x, and the P/S multiple is 3.65x. A DLOM (Discount for Lack of Marketability) of 17.0% was applied, suggesting some level of risk associated with the investment. The WACC (Weighted Average Cost of Capital) stands at 14.51%, indicating a relatively high cost of capital.

- **Strategic Positioning:** With operations in Philadelphia, PA, and being part of the Asset Management & Custody Banks industry, the company is positioned among major players like State Street Corp and Bank of New York Mellon Corp. The company's significant revenue and net income suggest strong competitive positioning, but its growth potential may be influenced by industry trends and regulatory changes.

Valuation Methodology Weighting

Our intelligent weighting system dynamically determines the optimal balance between the three valuation approaches based on your business characteristics, industry, financial metrics, and profitability patterns.

Applied Weights

Approach	Weight
Income Approach	**52.3%**
Market Approach	**43.0%**
Asset Approach	**4.7%**

Weighting Rationale

Factor	Details
Industry	Asset Management & Custody Banks
Key Factors	• Large business size favors income and market approaches • Consistent profitability supports income approach

Asset Approach

The **Asset Approach**, also known as the asset-based approach, determines a company's value by summing the fair market value (FMV) of its assets and then subtracting the FMV of its liabilities. The result is the Net Asset Value (NAV) of the company. This method essentially asks: "What would be the net cash proceeds if the business sold all its assets and paid off all its debts?"

This approach is often considered to provide a "floor" value for a business, particularly if the business is not a going concern or if its asset values are a significant component of its overall worth (e.g., real estate holding companies, investment firms, or capital-intensive manufacturing businesses). For profitable operating businesses, the Income and Market approaches usually yield higher values because they capture intangible value (goodwill, brand, customer relationships) not reflected on the balance sheet.

Valuation Calculation

Asset Approach Component	Value
Total Assets	$0
Less: Total Liabilities	($0)
Net Asset Value	**$0**

$0

Asset Approach Valuation

Income Approach

The **Income Approach** is a fundamental valuation methodology that focuses on the expected future income or cash flow a business can generate. The core idea is that a business's value is the present worth of the future economic benefits it will produce for its owners. This approach is particularly relevant for established businesses with a track record of earnings. Hyperion employs two primary methods under the Income Approach:

Seller's Discretionary Earnings (SDE): This method is often used for smaller, owner-operated businesses. It determines the total financial benefit available to a single owner-operator and applies a multiple to this figure. The multiple is derived using a build-up method that considers various risk factors.

Discounted Cash Flow (DCF): Typically used for larger or more complex businesses, this method projects the company's future Unlevered Free Cash Flows (FCFF) over a specific period. These projected cash flows, along with an estimated terminal value (representing value beyond the projection period), are then discounted back to their present value using a Weighted Average Cost of Capital (WACC).

The final Income Approach value displayed in the Executive Summary is a blend of the SDE and DCF valuation results when both are available and appropriate, providing a more comprehensive view of income-based value.

Seller's Discretionary Earnings (SDE) Method

TTM SDE Component	Value
TTM Net Income	$219,942,080,000
Add: TTM Interest	$80,000
Add: TTM Taxes	$0
Add: TTM Depr/Amort	$80,000
TTM Seller's Discretionary Earnings	**$219,942,240,000**

SDE Multiple Build-Up Analysis

The SDE multiple is derived using a build-up method that considers various risk factors to determine an appropriate capitalization rate, which is then converted to a multiple:

Build-Up Component	Rate	Explanation
Risk-Free Rate	4.7%	20-year Treasury yield

Equity Risk Premium	+5.5%	Market risk premium
Size Premium	+0.5%	Small company risk
Industry Risk Premium	+5.0%	Industry-specific risks
Company-Specific Risk	+1.5%	Unique business risks
Discount Rate	**17.2%**	**Total required return**
Less: Growth Rate	-2.0%	Long-term SDE growth
Final SDE Multiple (1/Cap Rate)	**6.58x**	Applied to TTM SDE

$1,447,219,939,200

SDE Method Valuation

Discounted Cash Flow (DCF) Details

The DCF method (Discounted Cash Flow (DCF)) is a more forward-looking income-based approach. It involves projecting a company's Unlevered Free Cash Flow (FCFF) – the cash flow available to all investors (debt and equity holders) after accounting for operating and capital expenditures – for a certain number of years into the future. A terminal value is then estimated to capture the value of all cash flows beyond the explicit projection period. Both the projected FCFFs and the terminal value are discounted back to the present using the Weighted Average Cost of Capital (WACC), which reflects the blended risk and return expectations of the company's investors. The sum of these discounted cash flows represents the Enterprise Value (EV). To arrive at Equity Value, net debt is typically subtracted from the EV.

DCF Assumptions & Calculations:

Assumption	Value	Explanation
Projection Years	5	Standard 5-year projection period
Short-Term Growth Rate	3.0%	Conservative 3.0% default growth rate (insufficient historical data)
Long-Term Growth Rate		

	2.0%	2.0% long-term growth (Historical analysis (Annualized quarterly average))
WACC Components:	**14.5%**	*Weighted Average Cost of Capital*
• Risk-Free Rate	4.7%	4.7% risk-free rate
• Equity Risk Premium	5.5%	5.5% equity risk premium
• Beta	1.0	Market beta of 1.0 (no industry-specific data)
• Size Premium	0.5%	Company value ~$300000000000 → 0.5% size premium
• Industry Risk Premium	5.0%	Mixed/Other sector: 5.0% (GICS Sector Analysis (inferred from "Asset Management & Custody Banks"))
• Company-Specific Risk	1.5%	Company-specific risks: 1.5% (Systematic company-specific analysis)
Cost of Debt (Pre-Tax)	7.0%	7.0% assumed cost of debt (no historical debt/interest data)
Debt-to-Equity Ratio	30.0%	30% assumed (zero or negative equity on balance sheet)
Effective Tax Rate	21.0%	Federal corporate tax rate (21.0%) - no historical tax data available

Base Year (TTM) Metrics:

Metric	Value
TTM Revenue	$200,000,000,000
TTM EBIT	$199,940,160,000
TTM FCFF	$157,952,726,400

$1,339,848,232,522

DCF Value (Equity Value)

Analyst Insights on DCF

- **WACC Analysis:** The WACC (Weighted Average Cost of Capital) is given as 14.51%, which seems relatively high. This discount rate is used to calculate the present value of future cash flows, and a higher rate reduces the valuation. With a risk-free rate of 4.70% and a beta of 1.00, the cost of equity appears to be substantial.

- **Terminal Growth Rate:** The terminal growth rate is assumed to be 2.00%, which might be optimistic given current economic fundamentals. Historically, long-term GDP growth rates have been around 2-3%, but this can vary by industry and region. A 2.00% terminal growth rate may not adequately capture future cash flow growth.

- **Cash Flow Projections:** The DCF model projects cash flows for 5 years into the future, which is a common practice. However, without specific details on revenue and expense projections, it's challenging to assess their reasonableness. Assuming these projections are based on historical trends and industry outlooks, they should be scrutinized for sensitivity.

- **Terminal Value Proportion:** The terminal value (PV) represents $758,584,943,978.253 of the total equity value of $1,339,848,232,522.005, indicating that approximately 56.6% of the valuation comes from terminal cash flows beyond the projection period. This highlights a significant reliance on assumptions regarding the terminal growth rate and discount rate; hence, their sensitivity should be thoroughly tested.

$1,393,534,085,861

Blended Income Approach Valuation

Income Approach Analysis

- **Earnings Quality:** The company's TTM SDE of $219,942,240,000 indicates a substantial earnings base. However, the quality of these earnings depends on factors such as revenue stability and cost structure, which are not provided. A 2% long-term growth rate suggests moderate expectations for future earnings growth. This relatively stable outlook could support the valuation.

- **Multiple Reasonableness:** The SDE multiple used is 6.58x, which needs to be assessed against industry standards for Asset Management & Custody Banks. While specific SDE multiples for this industry are not provided, EBITDA multiples range from 13 to 16.22 in some reports, suggesting that a 6.58x SDE multiple could be reasonable or even conservative if adjusted for differences between SDE and EBITDA.

• **Risk Assessment:** The discount rate of 17.20% and capitalization rate of 15.20%, with a company-specific risk premium of 1.50%, reflect a relatively high-risk profile. This risk assessment may stem from industry-specific challenges, regulatory risks, or the company's market positioning. A risk-free rate of 4.70% provides context for the overall interest rate environment.

• **Market Positioning:** The valuation of $1,447,219,939,200 suggests that the company has a significant market presence within the Asset Management & Custody Banks industry. Located in Philadelphia, PA, with an address at 2200 Benjamin Franklin Parkway, implies potential access to major financial markets. However, buyer perspectives on growth prospects and synergies will influence this valuation's reasonableness.

• **WACC Analysis:** The WACC (Weighted Average Cost of Capital) is given as 14.51%, which seems relatively high. This discount rate is used to calculate the present value of future cash flows, and a higher rate reduces the valuation. With a risk-free rate of 4.70% and a beta of 1.00, the cost of equity appears to be substantial.

• **Terminal Growth Rate:** The terminal growth rate is assumed to be 2.00%, which might be optimistic given current economic fundamentals. Historically, long-term GDP growth rates have been around 2-3%, but this can vary by industry and region. A 2.00% terminal growth rate may not adequately capture future cash flow growth.

• **Cash Flow Projections:** The DCF model projects cash flows for 5 years into the future, which is a common practice. However, without specific details on revenue and expense projections, it's challenging to assess their reasonableness. Assuming these projections are based on historical trends and industry outlooks, they should be scrutinized for sensitivity.

• **Terminal Value Proportion:** The terminal value (PV) represents $758,584,943,978.253 of the total equity value of $1,339,848,232,522.005, indicating that approximately 56.6% of the valuation comes from terminal cash flows beyond the projection period. This highlights a significant reliance on assumptions regarding the terminal growth rate and discount rate; hence, their sensitivity should be thoroughly tested.

Market Approach

The **Market Approach** estimates a business's value by comparing it to similar businesses that have recently been sold or to publicly traded companies in the same industry. This involves analyzing prices and financial metrics of these comparable entities to derive valuation multiples.

Comparable Public Companies Analyzed

The following 20 public companies were identified as comparable to the subject business based on industry classification, business model, and size characteristics:

Ticker	Company Name	Market Cap	Exchange	Industry
AMTD	AMTD IDEA Group	$7,081,216	N/A	Asset Manage
ASA	ASA Gold and Precious Metals Limited	$579,206,038	N/A	Asset Manage
BBXIA	BBX Capital, Inc.	$52,888,215	N/A	Asset Manage
BCSF	Bain Capital Specialty Finance, Inc.	$956,161,690	N/A	Asset Manage
BENF	Beneficient	$2,673,165	N/A	Asset Manage
CCAP	Crescent Capital BDC, Inc.	$588,907,235	N/A	Asset Manage
CDIX	Cardiff Lexington Corporation	$47,509,980	N/A	Asset Manage
CWD	CaliberCos Inc.	$6,185,787	N/A	Asset Manage
ECCV	Eagle Point Credit Company Inc.	$957,889,331	N/A	Asset Manage
ECCX	Eagle Point Credit Company Inc. 6.6875% NT 28	$443,222,150	N/A	Asset Manage
... and 10 additional companies analyzed				

Historical Market Multiple Trends

The following table shows how industry peer multiples have evolved over recent quarters, providing context for the multiples used in this valuation:

Professional market multiple trend charts (6 quarters of peer data available)

Period	P/E Ratio	P/S Ratio	P/B Ratio
Q3 2023	16.22x	6.53x	1.08x
Q4 2023	7.80x	7.51x	0.96x
Q1 2024	15.63x	5.05x	1.42x
Q2 2024	11.91x	3.73x	1.18x
Q3 2024	15.04x	3.33x	1.55x
Q4 2024	**16.02x**	**3.65x**	**1.15x**

Note: The highlighted row shows the multiples used in this valuation. Historical trends help validate the reasonableness of current market multiples and indicate market sentiment changes.

Market Multiple Trend Analysis

- P/E Ratio: +6.5% vs prior quarter (expansion in market sentiment)
- P/S Ratio: +9.8% vs prior quarter (higher revenue valuations)
- P/B Ratio: -25.8% vs prior quarter (discount to book values)

Analysis based on 20 comparable public companies

Market Multiples Applied

Multiple	Value Used	TTM Metric	Implied Value
P/E Ratio	16.02x	$219,942,080,000	$3,523,252,179,520
P/S Ratio	3.65x	$200,000,000,000	$730,600,000,000

	1.15x	$0	$0	

Methodology

Guideline Public Company Method: Involves identifying publicly traded companies that are comparable to the subject business. Valuation multiples (e.g., Price/Earnings, EV/EBITDA, Price/Sales) are calculated for these public companies and then applied to the subject company's corresponding financial metrics. Adjustments, such as a Discount for Lack of Marketability (DLOM), are often necessary since private company shares are not as liquid as public shares.

Comparable Transactions Method (or Guideline Transaction Method): Focuses on the sale prices of similar private or public companies that have recently been acquired. Multiples derived from these transactions are applied to the subject company. This method can provide very relevant data if directly comparable transactions are available.

Hyperion's current implementation uses real market multiples and applies a standard DLOM.

Liquidity Adjustment

A Discount for Lack of Marketability (DLOM) of 17.0% has been applied to account for the reduced marketability of private company shares compared to public companies.

$1,176,899,103,001

Market Approach Valuation (After DLOM)

Market Approach Analysis

- **Multiple Reasonableness:** The Market Approach valuation uses multiples of 3.65x for P/S, 16.02x for P/E, and 1.15x for P/B. Compared to industry benchmarks, these multiples seem reasonable; however, a more detailed analysis is required to confirm their accuracy. Assuming the TTM Revenue of $200 billion and Net Income of $219.94 billion are accurate, we can assess if they align with peer company metrics.

- **Peer Company Comparability:** The quality of peer companies used for comparable analysis significantly impacts valuation results; however, specific peers were not provided in this context. Ideally, peers should be selected based on industry classification and fundamental characteristics such as size, growth prospects, profitability margins, etc., to ensure a fair comparison basis that reflects the company's market positioning.

- **Liquidity Discount Appropriateness:** A liquidity discount (DLOM) of 17% was applied to adjust for potential difficulties in buying or selling shares quickly enough or at a fair price due to limited trading activity. This adjustment seems reasonable given typical ranges observed; however, specific company circumstances could warrant higher/lower discounts based on factors like market capitalization size and historical trading volumes.

- **Market Positioning Considerations:** With an estimated Market Value of $1,176,899,103,000.53 and significant TTM financial metrics ($200 billion in Revenue and $219.94 billion in Net Income), the company appears to be a substantial player within its industry sector (Asset Management & Custody Banks). Its valuation multiples might reflect strong market positioning relative to peers; further analysis would help determine if these figures accurately capture underlying business performance versus broader industry trends during 2024 when considering period end date implications.

Supporting Financial Statements

The following financial statements provide the underlying data used in the valuation analysis. These statements have been standardized and normalized to ensure consistency across different accounting systems and reporting formats. Showing 4 quarters of comparative data.

Income Statement (Profit & Loss)

Shows the company's revenues, expenses, and profitability. Essential for Income Approach valuations.
